PERSONAL STATEMENT

I'm a junior software developer who is enthusiastic about creating computer programs. I have a good understanding of programming languages like Java ,Python, Javascript and I can write code that is easy to understand and maintain. I also know how to use tools like Git and follow Agile methodologies for software development. I pay attention to detail and can quickly find and fix problems in the code. I work well with others and enjoy collaborating with a team to create software. I'm always eager to learn and improve my skills, and I'm open to feedback from others.

- NUMPY
- REACT
- PANDAS
- ANGULAR
- JQUERY

EDUCATION

Marmara University

Bachelor's degree, Business Administration and Management, General

Sep 2011 – Jun 2015

WORK EXPERIENCE

March 2023 – Present

System Associate

Apprenticeship

Infosys - London, England

- As an apprentice at Infosys, I am currently immersed in a dynamic learning experience. My journey involves hands-on engagement with external projects, providing me with invaluable insights and skills in real-world scenarios. This immersive approach not only enhances my technical proficiency but also fosters a holistic understanding of various aspects within the field.

CodeYourFuture - 2023
Fullstack Software Engineer
Trainee

- CodeYourFuture is a non-profit organization, and all trainers volunteer to support us. This collaborative learning environment has shown me the value of mutual assistance and how working together can contribute to our collective growth. By collaborating on various topics, trainees enhance their learning skills and recognize the significance of teamwork in the tech field.

2021 – 2022 (1 yr)
Customer Support Specialist
Holmes Education Group -
London, England

- Responsible for gathering data and doing research. I was using customer service data, observations and market trends and reports to get a clear picture of the department's operations and ways to improve it.

- (Classroom): Introduction to Software Development (Part 2) | SDL4 A1.3 | - Cloud Academy
- Devops and Design

PROJECTS

- **Hotel Booking**

A user-friendly platform enabling login, sing up, room search,making reservations and as a manager to see all bookings. Technologies include React, Node.js, PostgreSQL, and JWT for secure authentication.

Key features: user registration, room filtering, reservations, and an admin panel for project management. Successfully deployed on AWS for stability and scalability.

- **Blog Webpage**

A blog platform where users can log in, sign up, create posts, comment, and like other posts. Technologies include React with TypeScript for the frontend, Java for the backend, JWT for secure authentication, and PostgreSQL for the database. Enhancing user engagement through features like post creation, commenting, and liking.

- **Class Planner**

ClassPlanner is a platform where users can sign in with Slack, and our system fetches information from their Slack profiles. Users can register for classes, select their roles, and manage their registrations. Technologies used: React, Express, PostgreSQL, with security ensured through JWT. Simplifying class registration and management for a seamless user experience.
