Baki Tuncer

Software Engineer

tuncerbaki@gmail.com • 07440691073
London, United Kingdom

As a software engineer, I'm eager to pivot towards cloud computing. With a solid foundation in languages like Java, Python, and JavaScript, I craft code that's both comprehensible and maintainable. Proficient in tools like Git, I adhere to Agile methodologies in my development process. Detail-oriented, I swiftly identify and resolve code issues. Collaborative by nature, I thrive in team environments, relishing the opportunity to co-create software solutions. Constantly striving for improvement, I welcome feedback from peers. Focused on cloud technologies, I aim to deepen my skills in developing and managing cloud-based applications.

Professional Experience

Infosys, London   June 2023
System Associate

As an apprentice at Infosys, I am currently immersed in a dynamic learning experience. My journey involves hands-on engagement with external projects, providing me with invaluable insights and skills in real-world scenarios. This immersive approach not only enhances my technical proficiency but also fosters a holistic understanding of various aspects within the field.

- Javascript
- React
- Java
- Python
- AWS
- Agile
- Numpy
- Pandas
- Database
- Git
- Github

CodeYourFuture, London   2023
Fullstack Software Engineer Trainee

CodeYourFuture is a non-profit organization, and all trainers volunteer to support us. This collaborative learning environment has shown me the value of mutual assistance and how working together can contribute to our collective growth. By collaborating on various topics, trainees enhance their learning skills and recognize the significance of teamwork in the tech field.

- HTML/CSS/JS
- React
- Node.js
- SQL
- AWS
- Github
- Git
- Docker
- Devops

Responsible for gathering data and doing research. I was using customer service data, observations and market trends and reports to get a clear picture of the department's operations and ways to improve it.

Education

Bachelor's degree, Business Administration and Management, General
Marmara University, Istanbul

Projects

Hotel Booking

A user-friendly platform enabling login, sing up, room search,making reservations and as a manager to see all bookings. Technologies include React, Node.js, PostgreSQL, and JWT for secure authentication.

Key features: user registration, room filtering, reservations, and an admin panel for project management. Successfully deployed on AWS for stability and scalability.

Blog Webpage

A blog platform where users can log in, sign up, create posts, comment, and like other posts. Technologies include React with TypeScript for the frontend, Java for the backend, JWT for secure authentication, and PostgreSQL for the database. Enhancing user engagement through features like post creation, commenting, and liking.

Class Planner

ClassPlanner is a platform where users can sign in with Slack, and our system fetches information from their Slack profiles. Users can register for classes, select their roles, and manage their registrations. Technologies used: React, Express, PostgreSQL, with security ensured through JWT. Simplifying class registration and management for a seamless user experience.

Certificate

Responsive Web Design - freeCodeCamp
Microsoft Certified: Azure Fundamentals – Microsoft
QA Software Engineering Skills Bootcamp - QA Ltd
SQL, Data, and Databases | SDL4 A1.3 | - Cloud Academy
Agile Fundamentals | SDL4 A1.3 | - Cloud Academy
Devops and Design - Cloud Academy
Java and Object-Oriented Programming (OOP) | SDL4 A1.3 | - Cloud Academy
